

May our force be with you

Energy

Our services are targeted at enhancing the capability (skills) and capacity (resources) of organisations, disciplines and research groups. Being part of the Intersect community allows our members and their researchers to benefit from our research technology gained across disciplines and organisations throughout each phase of the Research lifecycle. When it comes to sharing and solving eResearch challenges, we want to be your null hypothesis.

Research is our DNA

We are the people behind [Energy.intersect.org.au](https://energy.intersect.org.au). We improve researcher productivity with research computing solutions. Our eResearch Analysts support research at your organisation, providing expertise in data storage and management, HPC and cloud computing, IT planning and grants. Our software engineers develop tools, mobile and web applications to help researchers share and collaborate. Our trainers teach research tailored technology courses.

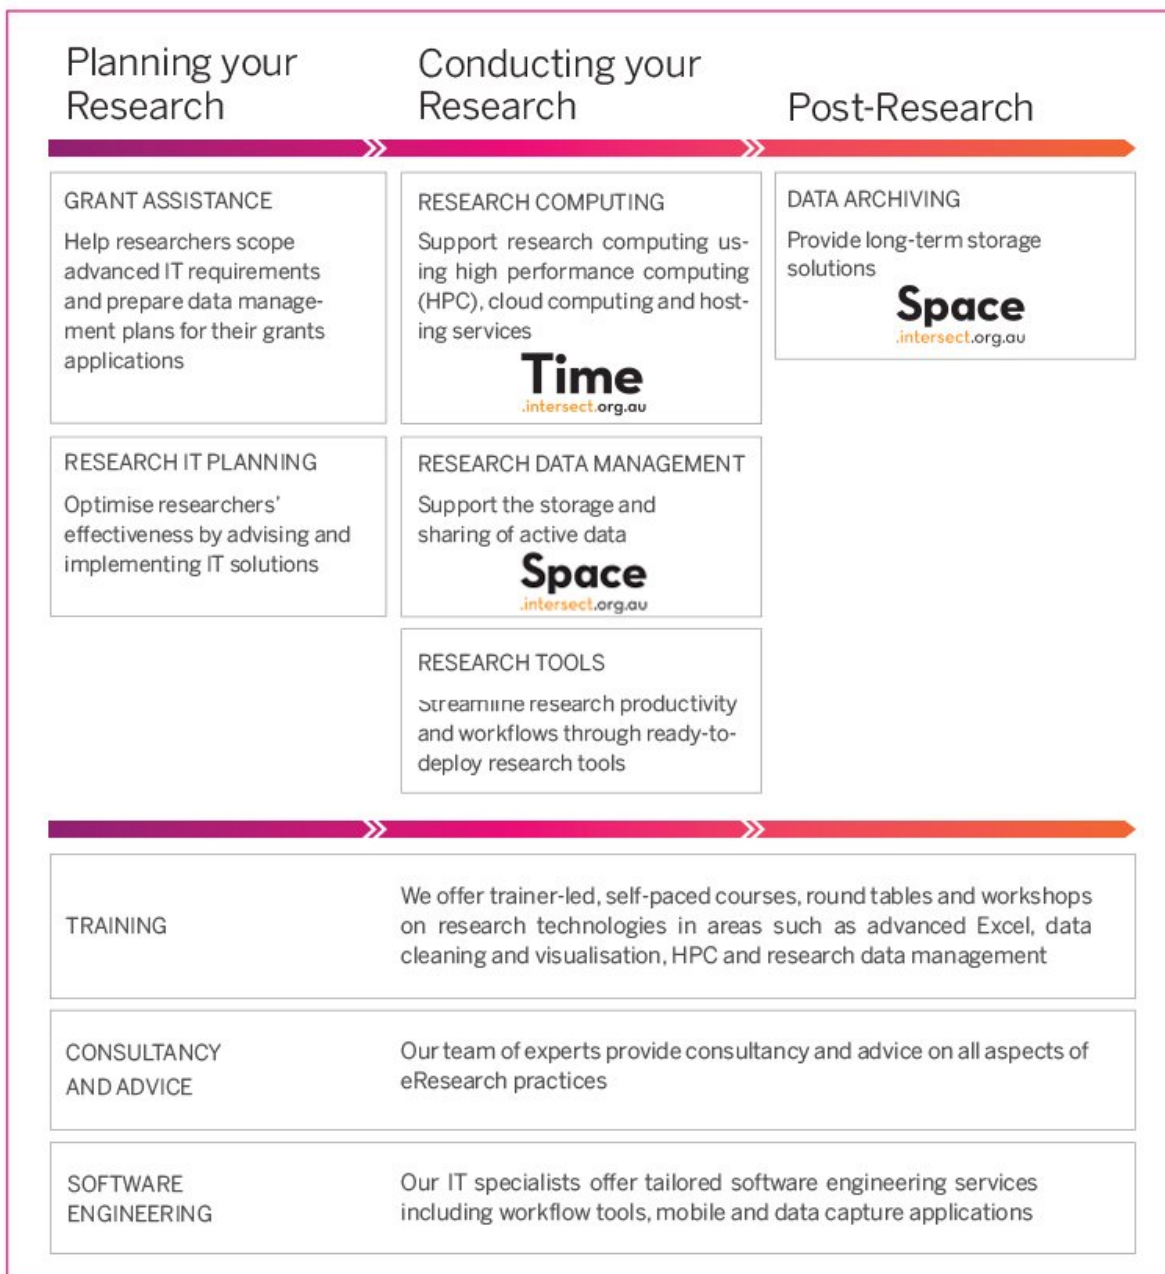

Intersect Australia is a not-for-profit organisation by NSW and ACT institutions. Our team supports the world-class research done at our member universities and other organisations by complementing locally delivered IT services. Your organisation's membership makes it easy for you to access all of our services. Members benefit from collaborative grant funding and economies of scale to deliver shared storage, compute and research platforms infrastructure.

Advanced IT solutions for Researchers

Our track record is in working with researchers to deliver eResearch solutions that work. Our focus is meeting researchers' needs by sharing and solving eResearch problems. We have successfully delivered over 100 research focused software engineering projects across all disciplines and platforms. We've trained over 10,000 researchers in 1,000 courses in advanced digital research topics. We help our members secure linked grant funding through collaboration.

Research lifecycle

Intersect offers professionally developed and operated services for its members and the wider research community. Services are targeted at enhancing the capability (skills) and capacity (resources) of institutions, disciplines and research groups.

Power up your eResearch capability with expertise, consulting, software engineering and training from Intersect

“One of the things that I really like about working with Intersect is they actually understand the sector. They got a much better understanding of the needs of universities than, say, commercial providers would have. In that way we can engage with them at a much deeper level in terms of the storage, compute and collaboration needs that researchers have”.

Mr Kerry Holling,
Chief Information and Digital Officer
Western Sydney University

Energy at your service...

Project Engagement

Project Engagement end to end process as used by the Intersect Engineering team

Software Maintenance

Software Maintenance is an optional service available for software built or implemented by Intersect Australia (and other software by special agreement).

IT Planning

Intersect eResearch Analysts provide services to assist researchers to optimise their research outcomes through the application of advanced IT solutions

Grants Assistance

Increase grant probability by enhancing research team grant applications

Expert Consulting

Intersect eResearch Analysts optimise research outcomes through the application of advanced IT solutions

Research Data Management

A range of research data management services to support researchers during the data active phase of the research lifecycle.

Software Engineering

Developing cost-effective, research-focused software applications, with a track record of over 100 software engineering projects delivered across all research disciplines.

Energy Boot Camp

Scheduled training and seminars run on member university campuses. Get in touch with your local [eResearch analyst](#) or visit: training.intersect.org.au
